This invention relates to a novel isolated monocle specifically binds to an epicope of a non-shed ext shed antigen or of human Mucl or Mucl6 protein. The useful for the development of compounds with a cyt therapy. The composition and methods are useful ir or monitoring malignancies, such as breast or ovar sequence is that of a peptide which was used for r the extracellular, non-shed region of Mucl6 and wh specification.	to non-shed human Mucl or Mucl6, useful monitoring malignancies, such as breast (Q ID NO 14; 113pp; English. lated monoclonal antibody that non-shed extracellular portion of a protein. The invention may be is with a cytostatic or for gene ire useful in diagnosing, treating reast or ovarian cancer. The present used for raising antibodies to Mucl6 and which is claimed in the	ful for diagnosing, st or ovarian cancer.                                        CC polypeptides present in normal and neoplastic ovariant cells. These cc comprise a nucleic acid sequence encoding any of the 167 amino acid CC sequences (e.g. 438, 237 or 233 amino acids) fully defined in the CC specification (SEQ. ID NOs: ADP81095 to ADP81261) and comprises any of the 128 nucleotide sequences (e.g. 4798, 1494 or 1691 bp) fully defined CC in the specification (SEQ. ID NOs: ADP80967 to ADP81094). The invention CC further comprises: a method for determining the presence of a ovarian CC specific nucleic acid (OSNA) in a sample; a vector comprising the above nucleic acid molecule, a host cell comprising the vector; a method for producing a polypeptide encoded by the above nucleic acid molecule; a cC method for determining the presence of an antibody or its fragment that specifically binds to the above polypeptide; a cC method for determining the presence of an ovarian specific protein in a CC sample; a method for determining the presence of an ovarian specific protein in a CC sample; a method for treating a patient, the kit comprising a means for CC polypeptide; a method of treating a patient with ovarian cancer; and a cc cancer comprising the above nucleic acid molecule or presence of the above nucleic acid molecule or comprising the presence and metastases of vaccine comprising the above nucleic acid molecules have cytostatic activity. The isolated polypeptides may be used to create a cc cancer and treating ovarian cancer. This securence are protein to concert and treating ovarian cancers the protein concerts the protein concerns the protein

                                                                                                                     This invention relates to a novel isolated monoclonal antibody that specifically binds to an epitope of a non-shed extracellular portion of a shed antigen or of human Mucl or Mucl6 protein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of a Muc epitope of the invention.
                                                                                                                                                                                                                                                                                                             Payne G,

                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a novel isolated monoclonal antibody that specifically binds to an epitope of a non-shed extracellular portion of a shed antigen or of human Mucl or Mucl fyrottein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of the human Mucl6 GST fusion protein which was used in

CC polypeptides present in normal and neoplastic ovarian cells. These comprise a nucleic acid sequence encoding any of the 167 amino acid sequences (e.g. 438, 237 or 233 amino acids) fully defined in the secification (SEQ. ID NOS: ADP81095 to ADP81261) and comprises any of the 128 nucleotide sequences (e.g. 4788, 1494 or 1691 bp) fully defined in the specific acid (SEQ. ID NOS: ADP80967 to ADP81094). The invention CC further comprises: a method for determining the presence of a ovarian specific nucleic acid (OSNA) in a sample; a vector comprising the above nucleic acid molecule; a host cell comprising the vector; a method for CC producing a polypeptide encoded by the nucleic acid molecule; a cc polypeptide encoded by the above nucleic acid molecule; a cc method for determining the presence of an ovarian specific protein in a cc sample; a method for diagnosing or monitoring the presence and metastases of ovarian cancer in a patient, a kit for determining the presence of comprising a means for CC polypeptide; a method of treating a patient with ovarian cancer; and a cc polypeptide; a method of treating a patient with ovarian cancer; and a cc vaccine. The isolated nucleic acid molecules and polypeptides have cytostatic activity. The isolated polypeptides may be used to create a cc vaccine. The isolated nucleic acid molecules and polypeptides can be used coreate and creating ovarian cancer. This sequence represents the protein cancer and treating ovarian cancer. This sequence represents the protein of an ovarian specific gene of the invention.

Specifically, it refers to a screening assay to identify potential antitumour agents, as well as methods to assess the cancerous state of a cell. The present invention describes antibodies against the expression products of these cancer-related genes that are capable of targeting a cancerous cell in vivo. Furthermore it provides immuno-conjugates containing such antibodies, which can be used to deliver target therapeutics thereto. Accordingly, these compositions that exhibit cytostatic and immunostimulant activities are useful for preventing or treating cancer in humans and in particular the treatment of ovarian cancer. This polypeptide sequence is a protein encoded by a human cancer-linked gene of the invention.

The invention relates to a CA125 protein comprising: (a) an extracellular camino terminal domain; (b) an amino terminal domain; and (d) a carboxy terminal domain. The extracellular amino terminal domain comprises 5 genomic exons, the amino terminal extension comprises 4 genomic exons, each repeat unit comprises 5 genomic exons and the carboxy terminal domain comprises a transmembrane anchor with a short cytoplasmic domain, and further comprises 9 genomic exons. The gene for cytoplasmic domain, nucleic acids (including variants, homologues and call25 repeat domain, nucleic acids (including variants, homologues and call25 repeat units (or their variants, respect units, a vector comprising the nucleic acid, a cultured cell comprising the vector, a comprising the versions) encoding CA125 proteins or repeat units, a vector of the CA125 repeat units (or their variants, fragments or sequences of the CA125 repeat units (or their variants, fragments or sequences of cetecting and monitoring the presence of CA125 protein, a diagnostic for detecting and monitoring the presence of CA125 protein, a diagnostic for comprise in the receptor-binding domain of CA125 protein, a diagnostic for disease or disease recurrence associated with elevated CA125 repeat unit of the CA125 antigen to treat domain including epitope binding sites), a therapeutic vaccine to treat comprising recombinant CA125 repeat domains including epitope binding sites), a therapeutic vaccine to treat comprise of CA125 antigen levels or at risk of developing a comprise of CA125 antigen antisense oligonucleotide that inhibits the comprise of CA125 antigen, which can be used for detecting and monitoring the compression of CA125 antigen, which can be used for diagnosing, monitoring the compression of CA125 antigen, which can be used for developing a vaccine compression of CA125 antigen and cancer and other carcinomas where CA125 is expressed. The molecules are also useful for developing a vaccine compression of the catering and monitoring the compression of the ca

The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, to identify their cognate ligands or binding partners, in chemotaxis and can be used as a food additive. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above and in diagnostic the invention is used in alleviation. The DNA of the invention is used in agency (ELISA). The DNA of the invention is used in a gency the invention to sease a second and in diagnostic the invention is used in a gency the processor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ovarian cancer associated protein (collectively known as ovarian cancer antigens) genes, and ARE12633-ARE12639 represent the proteins they encode. ARE12630-ARE12638 represent human ovarian cancer antigenic fragments or variants. Ovarian cancer antigens and their corresponding DNAs are used in the prevention, diagnosis and treatment of diseases associated with their inappropriate expression. These disorders include proliferative disorders, cancer, tumours, respiratory system disorders, asthma, haematopoletic disorders, diseases of the immune system, AIDS, even disorders associated associated as the province of the sum of the sum of the province of the sum of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding 7 ovarian cancer antigen polypeptides, useful for preventing, diagnosing and/or treating ovarian cancer and ovarian cancer metastases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein

The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies. T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray technology. The present sequence represents a human ovarian carcinoma

The invention describes nucleic acids (I) and the polypeptides (II) they CC encode. The nucleic acids (I) may be used for preventing, diagnosing and CC treating diseases related to their aberrant expression i.e. breast CC cancers. For example, (I) and (II) may be used to treat disorders CC cancers. For example, (I) and (II) may be used to treat disorders CC in active proteins or to supplement the activity of (II) by expressing CC inactive proteins or to supplement the patients own production of (II). CC Additionally, (I) may be used to produce (II), by inserting (I) into a CC complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar nucleic acids in CC samples, and therefore which patients may be in need of restorative CC therapy. The host cell may also be used as antigens in the production of CC antibodies against (II) and in assays to identify modulators of (II)'s CC complementary and activity. The anti-(II) antibodies, agonists and carcivity and as complementary and activity. The anti-(II) antibodies, agonists and carcinoma carcinoma as complementary and activity and as complementary and activity and as complementary and activity. The anti-(II) antibodies, agonists and carcinoma carcinoma carcinoma carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Oncogenic nucleic acids useful for the prevention, treatment of breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 13; SEQ ID NO 483; 399pp;

CC comprises 4 genomic exons, each repeat unit comprises 5 genomic exons and CC the carboxy terminal domain comprises 9 genomic exons and CC the carboxy terminal domain comprises 9 genomic exons. The gene for CC CA125 is located on human chromosome 19q 13.2. Also included are isolated CC CA125 repeat domains, nucleic acids (including variants, homologues and CC degenerate versions) encoding CA125 proteins or repeat units, a vector CC comprising the nucleic acid, a cultured cell comprising the vertor, a ccl the CA125 repeat units (or their variants, fragments or sequences of the CA125 repeat units (or their variants, fragments or sequences of cepitope in the receptor-binding domain of CA125 protein, a diagnostic for cepitope in the receptor-binding domain of CA125 protein, a diagnostic for cepitope in the receptor-binding sites) and the levated CA125 antigen (comprising calls with elevated CA125 antigen (comprising commands with elevated CA125 antigen levels or at risk of developing a commands with elevated CA125 repeat unit of the CA125 entigen comprising recombinant CA125 repeat domains including epitope binding sites), a therapeutic vaccine to treat commands with elevated CA125 antigen levels or at risk of developing a combining sites) and an antisense oligonucleotide that inhibits the captesession of CA125 antigen, which can be used for diagnosing, monitoring the presence of CA125 antigen, which can be used for diagnosing, monitoring the presence of CA125 antigen, which can be used for daynosing, monitoring the presence of CA125 antigen, which can be used for developing a vaccine compressed. The molecules are also useful for developing a vaccine compression of CA125 antigen levated cancer. The present sequence is a CA125 repeat protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

CC AAD20618-AAD20624 represent cDNAs corresponding to 7 human ovarian and CC ovarian cancer associated protein (collectively known as ovarian cancer CC antigens) genes, and AAE12623-AAE12629 represent the proteins they CC encode. AAE12630-AAE12638 represent human ovarian cancer antigenic CC fragments or variants. Ovarian cancer antigens and their corresponding CDNAs are used in the prevention, diagnosis and treatment of diseases CC aschma, haematopoietic disorders, tumours, respiratory system disorders (aschma, haematopoietic disorders, diseases of the immune system, AIDS, CC skin disorders, autoimmune diseases of the immune system, AIDS, CC disease, Parkinson's disease, septic shock, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders, kidney disorders, according testinal disorders, endocrine disorders and infections. The CC gastrointestinal disorders, endocrine disorders and infections. The CC proteins can also be used to aid wound healing and epithelial cell CC proteins can also be used to aid wound healing and epithelial cell CC proliferation, to prevent skin aging due to sunburn, to maintain organs CC specific for a protein of the invention can be used in alleviating CC specific for a protein of the invention can be used in alleviating CC specific for a protein of the invention can be used in alleviating CC specific for a protein of the invention can be used in diagnostic C immunoassays e.g., enzyme linked immunosorbent assay (ELISA). The DNA of the invention is used in gene therapy. The present sequence represents a CC human ovarian cancer antigenic fragment of the invention

CC binding antibody fragment (I), that preferentially binds cell-associated CC (A 125/0772P polypeptide relative to shed CA 125/0772 polypeptide, Also CC asscribed: (I) a monoclonal antibody (II) produced by hybridoma 487; (2) CC a monoclonal antibody that comprising the formal cast deposited in (III); (4) an isolated nucleic acid molecule (III) (5) a pharmaceutical composition comprising an antibody cramaceutical composition comprising an antibody or an antigen-binding antibody fragment that preferentially binds cell-associated (CI); (5) a pharmaceutical composition comprising an antibody or an antigen-binding monoclonal antibody fragment that preferentially binds cell-associated CA 125/0772P polypeptide comprising an antibody, or an antigen-binding monoclonal antibody fragment that preferentially binds cell-associated CA 125/0772P polypeptide comprising an antibody, or an antigen-binding material and a composition comprising an antibody. Or an antigen-binding antibody fragment that composition in a form suitable for administration to a subject; (8) a fusion polypeptide (V) comprising an antibody, or an antigen-binding composition in a form suitable for administration to a subject; (8) a definition of a carrier; (9) and carrier; (1) and (12) a pharmaceutical composition competed (CI), and (13) and (CI), and (13) and (CI), and (CI), and (CI), and (CI) and (CI), and (CI) and (CI), and (CI) and (CI
                                                                                                                                                                                Query Match

CC hinding antibody fragment (1), that preferentially binds cell-associated CC (2A 125/0772p polypeptide relative to shed CA 125/0772 polypeptide. Also CC described: (1) a monoclonal antibody (11) produced by hybridoma 427; (2) a monoclonal antibody that competes with binding of (11); (3) a hybridoma (2C) as deposited in (11); (4) an isolated nucleic acid molecule (111) (2) a hybridoma (2C) (21); (5) a pharmaceutical composition comprising antibody or an antiper-binding antibody fragment that preferentially binds cell-associated CA 125/072P polypeptide relative to shed CA 125/0772P polypeptide relative to shed CA 125/0772P polypeptide, and a carrier; (6) a pharmaceutical composition comprising a monoclonal antibody or an antigen-binding monoclonal antibody fragment that preferentially binds cell-associated CA 125/0772P polypeptide (2C) comprising an antibody or an antigen-binding antibody fragment that preferentially binds cell-associated CA 125/0772P polypeptide (2D) comprising packaging material and a composition of comprising an antibody or an antigen-binding antibody fragment that preferentially binds cell-associated CA 125/0772P relative to shed CA 125/0772P relative to shed CA 125/0772P relative to shed CA 125/0772P polypeptide (8) a composition in a form suitable for administration to a subject; (8) a monoclonal antibody or an antibody or an antigen-binding cell-associated CA 125/0772P relative to shed CA 125/0772P operably linked to a heterologous (125/0772P preferentially binds cell-associated CA 125/0772P relative to shed CA 125/0772P operably linked to a heterologous (125/0772P associated CA 125/0772P relative to shed CA 125/0772P operably linked to a heterologous (125/0772P associated CA 125/0772P relative to shed CA 125/0772P operably linked to a heterologous composition in a monoclonal antibody or antibody or antigen binding antibody or antibody or antibody or antibody or antigen binding cell associated CA 125/0772P related disorder which (12) and (13) and (13) a pharmaceutical composition compris
               Novel isolated antibody, or antigen-binding antibody fragment binding with cell-associated CA 125/0772P polypeptide relative to shed CA 125/0772 polypeptide, useful for ameliorating cervical or ovarian cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated antibody, or an antigen-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C;Comment: Complement C3 contains two chains, formed by removal of four residues and lin alternative complement pathways, releases the C3a anaphylatoxin from the amino end of trative-complement-pathway C3/C5 convertase.

C;Comment: C3a anaphylatoxin is a vasoactive peptide and a mediator of inflammation.

C;Comment: C3b, with its highly reactive thiol group, binds to the surface of foreign particles of the complement-pathway C3/C5 convertase. The activity of C3b is regulated by proceedings of the major site of synthesis of this plasma protein is the liver.

C;Supperfamily: alpha-2-macroglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Molecule type: protein

ridentification and alignment of a thiol ester site in the third component of guinea pig complement.";

RI Biochemistry 22:942-947(1983).

CC -i- FUNCTION: C3 plays a central role in the activation of the complement system. Its processing by C3 convertase is the central complement system. Its processing by C3 convertase is the central complement pathways. Its processing by C3 convertase is the central complement pathways. CC reaction in both classical and alternative complement pathways. CC After activation C3b can bind covalently, via its reactive thiolester, to cell surface carbohydrates or immune aggregates. CC thiolester, to cell surface carbohydrates or immune aggregates. CC -i- FUNCTION: Derived from proteolytic degradation of complement C3, C3 anaphylatoxin is a mediator of local inflammatory process. It induces the contraction of smooth muscle, increases vascular permeability and causes histamine release from mast cells and CC permeability and causes histamine release from mast cells and CC subsophilic leukocytes.

CC -i- SUBNUT: C3 precursor is first processed by the removal of 4 Arg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               InterPro; IPR002890; A2M_N.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             residues, forming two chains, beta and alpha, linked by a disulfide bond. C3 convertase activates C3 by cleaving the alpha chain, releasing C3a anaphylatoxin and generating C3b (beta chain + alpha chain).

SIMILARITY: Contains 1 anaphylatoxin-like domain.

SIMILARITY: Contains 1 NTR domain.
